WEEDEX (WDX) — Whitepaper

Sep 23, 2026 · WEEDEX Team · **Working draft — not for publication before legal review**

Summary

WDX is the token of WEEDEX, a liquidity pool platform on the Solana network. Holding WDX grants access to the platform's tiers; token sales fund the production capital of the pools, with a target of $2.5 million deployed.

WDX is not a package bought once and forgotten. A tier stays active while the holder keeps enough WDX, measured on-chain and priced at a verified market rate. Sell below the minimum and the tier drops; top up again and it comes back automatically.

Item	Value
Network	Solana (Token-2022, official program)
Ticker	WDX
Total supply	1,000,000,000 WDX, with a burn mechanism
Transfer fee	5% on every transfer, allocated to the founders
Main utility	tier access by holding and referral program
Production target	$2.5 million deployed in liquidity pools
Holding rewards	paid in WDX, capped at 50% to 150% APY depending on the lock period, limited by a budget
Production yield	paid in SOL or USDT

The WEEDEX ecosystem

WEEDEX deploys capital into liquidity pools on Solana and shares the production — the fees the pools charge traders — among clients, brokers, the referral network and the company. WDX is the access key and the growth engine of that system.

Component	What it does
Vault	takes USDC deposits with 30, 90, 180 or 360-day lock periods; every deposit is verified on-chain by its transaction hash
LIQ	the desk that selects and monitors the pools (Raydium, Orca, Meteora, PumpSwap)
Brokers	bring in clients; the tier sets how much each broker can raise (Pool Size)
Referral network	up to 5 referral levels, paid from WDX sales and from pool production
Production treasury	the company's capital in the pools, funded by 45% of every WDX sale

Capital flow

1. A WDX sale on the platform brings in USDT: 45% goes to the production treasury and 35% to the referral network.
2. The production treasury and Vault deposits are deployed into liquidity pools on Solana.
3. The pools generate production, paid in SOL or USDT.
4. Production is split among clients, broker, referral network and company.

WDX utility: tiers by holding

Each holder's tier is the highest step whose minimum their WDX value reaches, in USDT. There is no package to buy or renew: the tier stays active while the holding is maintained.

Tier	Minimum holding	Pool Size	Referral levels
BASIC	$50	$3,000	1
START	$100	$7,500	2
PRO	$250	$25,000	3
BLACK	$500	$50,000	4
2 D MOON	$1,250	unlimited	5

- **Pool Size** is the maximum a broker can raise from clients into the Vault. It is not a balance, not a credit and not money paid to anyone.
- **Referral levels** set how deep a holder earns from WDX sales and from production.
- **Every active tier** gets access to LIQ, the view of the pools where capital is working.

Example: 1,000 WDX at $0.25 is worth $250 and qualifies for PRO. If the holder sells 600 WDX, the remaining 400 are worth $100 and the tier drops to START. Buying back up to $250 restores PRO with no request and no manual approval.

Minimum holdings are platform parameters and can be adjusted by the administration. The amount of WDX required changes with the price: what counts is value.

How holdings are verified

No tier is granted on what a user declares or on what a database remembers. Everything is read on Solana and priced at a verified rate; when in doubt, the system denies.

1. **Wallet link.** The user connects Phantom and signs a WEEDEX message. The signature proves wallet ownership without moving funds or authorizing any transaction. One wallet can be linked to one account only.
2. **Balance reading.** The WDX balance is read on-chain from finalized blocks only. A failed reading is never treated as a zero balance.
3. **Verified price.** The price is the executable sell price on Jupiter, cross-checked against DefiLlama. The lower of the latest quote and the 30-minute average applies, and a shallow pool (round-trip cost above 5%) is not used for pricing.
4. **Activation window.** A new or higher tier only takes effect after the balance has been held for 1 hour. This blocks borrowing WDX for a few minutes or passing the same tokens from account to account.

5. **Immediate downgrade.** A single reading below the minimum drops the tier at once. There is no grace period.
6. **Continuous monitoring.** Wallets are re-read every 5 minutes, and users can request an on-demand reading. Without a verified reading in the last 15 minutes, the tier is suspended until the next one.

Every reading and every tier change is logged with balance, price, source and time, and users can see that history in the dashboard.

Platform sale, custody and holding rewards

WDX is sold on the WEEDEX platform at market price and held in company custody for 90, 180 or 360 days, as chosen by the buyer. While in custody it counts toward the holder's tier and earns additional WDX.

How a purchase works

1. The buyer chooses the amount in USDT and the lock period.
2. The platform locks the price for 15 minutes. The price is the market buy price, never below it.
3. The buyer pays in USDT from their linked wallet and submits the transaction hash.
4. The payment is verified on-chain: amount, network, source wallet, time window and a hash never used before. Once verified, the purchase confirms automatically.
5. At the end of the lock period, the purchased WDX plus rewards are sent to the buyer's wallet, and that transfer is also verified on-chain.

Holding rewards (paid in WDX)

Lock period	Annual cap (APY)	Over the period, on 1,000 WDX
90 days	50%	up to 123 WDX
180 days	100%	up to 493 WDX
360 days	150%	up to 1,479 WDX

The rates above are **caps**, pro-rated by the days in custody. Rewards come from a finite reserve of 300 million WDX distributed over 4 years (75 million per year, allocated daily). When total holdings would require more than the daily budget, all rates are reduced in the same proportion. The more WDX in custody, the lower the effective rate. The dashboard always shows the effective rate of the day.

WDX held in the user's own wallet, outside custody, counts toward the tier but does not earn rewards.

Referral program

35% of every WDX sale is the community marketing budget, paid in USD to referrers across up to 5 levels. It is the margin WEEDEX allocates to growing the network.

Level	% of the sale	On a $1,000 sale
L1	15%	$150
L2	5%	$50
L3	5%	$50
L4	5%	$50
L5	5%	$50

- **Only active tiers earn**, meaning holders who keep WDX. The tier sets the depth: BASIC L1 only, START up to L2, PRO up to L3, BLACK up to L4, 2 D MOON up to L5.
- **Compression.** A referrer who does not qualify for a level is skipped, and the level passes to the next qualifying referrer above. Each person earns one level per sale.
- **Unclaimed levels** stay with the company.
- **Instantly withdrawable balance**, with a source-of-funds review on every withdrawal.
- A commission only exists once the sale payment has been proven on-chain. Every credit points to the hash of the sale that generated it.

The referral network also shares in pool production (next section), with the same depth and the same compression.

Pool production

The target is $2.5 million deployed in liquidity pools. Since 45% of every WDX sale goes to the production treasury, the target is reached with $5.56 million in sales.

Production is the fees the pools charge traders. It is paid in SOL or USDT and split as follows:

Recipient	% of production
Client (deposit owner)	50%
Responsible broker	10%
Referral network, L1 to L5	2% per level (10%)
Company	30%

- Each deposit's broker is fixed when the money comes in, and the deposit counts against that broker's Pool Size.
- The production referral chain starts above the broker and follows the same depth and compression as sales.
- The split applies to production only, never to deposited capital.

Production varies with trading volume and with the price of the pool's assets, and it can be negative over a period. No yield is promised.

Tokenomics

Total supply is 1 billion WDX, minted once, with a burn mechanism. The token exists to fund the production target: the sale allocation covers the $5.56 million in sales at any average price from $0.0185 per WDX.

Supply allocation

Allocation	%	WDX	Use
Platform sale	30%	300,000,000	sold to build the production treasury
Staking reserve	30%	300,000,000	holding rewards, 75 million per year over 4 years
Treasury and expansion	20%	200,000,000	operations and platform growth
Liquidity	10%	100,000,000	WDX/USDT pool on a DEX

Allocation	%	WDX	Use
Team and founders	10%	100,000,000	subject to vesting

Use of sale proceeds (per USDT sold)

Destination	%
Production treasury (pools)	45%
Marketing (referral network)	35%
WDX liquidity	10%
Expansion	5%
Founders	5%

Every confirmed sale records where each cent goes, and progress of the production treasury toward $2.5 million is tracked in the dashboard. The share of marketing the network does not claim, for lack of qualifying referrers, stays with the company and is recorded separately.

Transfer fee. Every WDX transfer pays a 5% fee, allocated to the founders' wallet. On Solana the fee does not distinguish buys, sells or wallet-to-wallet transfers: it applies to all of them. On custody release, WEEDEX pays the fee, so buyers receive the full amount. The fee is in addition to the use of sale proceeds above, which does not change.

Burn. WEEDEX runs scheduled WDX burns, following the model Binance adopted for BNB. The company decides when and how much to burn based on two indicators: **scarcity** (circulating supply relative to demand) and **liquidity** (depth of the WDX/USDT pool). Every burn is executed on-chain, permanently removing the WDX from circulation, and published with the transaction and the new total supply, verifiable by anyone on Solscan.

Security and transparency

The WEEDEX rule is that money only moves with on-chain proof, and that when in doubt the system denies. An error that costs access is preferable to an error that grants an undue tier or payment.

- **On-chain proof.** Deposits, WDX purchases and custody releases only count once the transaction is read on Solana, finalized, with network, token, amount, source and destination verified.
- **One hash, one operation.** The same transaction never counts for two purchases or two deposits.
- **Immutable ledger.** Money records are never deleted or rewritten; corrections are added as new records, with their origin.
- **Nothing decided in the browser.** Price, balance, tier and commission are computed server-side; the dashboard only displays them.
- **Reconciled custody.** WDX in custody is continuously checked against the treasury wallet balance; any shortfall raises an alert.
- **Reviewed withdrawals.** Every withdrawal request reserves the amount and is reviewed against the source of funds before payment.

WDX uses Token-2022, Solana's official token program, with the transfer fee extension and no custom contract. The mint authority will be revoked after the 1 billion supply is minted, the fee configuration authority will be revoked to lock the fee at 5%, and the token will have no freeze authority. The platform rejects any extension that would allow moving or freezing third-party WDX.

Roadmap

Launch proceeds in stages, and each stage starts only once the previous one has been verified. Dates will be published as stages are confirmed.

Stage	What happens	Status
1. Platform	tiers by holding, platform sale, custody, holding rewards and referral network built and tested	completed
2. Token on devnet	WDX created on the test network with the same parameters as mainnet	in progress
3. Controlled testing	wallet link, purchase, custody and release with real devnet wallets	next
4. Mainnet	WDX creation, mint authority revoked, distribution to allocation wallets	next

Stage	What happens	Status
5. Liquidity	WDX/USDT pool on a DEX, deep enough for verified pricing	next
6. Sale opens	platform sale and tiers by holding go live	next
7. Production target	$2.5 million deployed in pools	goal

Risks and disclaimers

Buying or holding WDX carries risk of loss, including total loss. Nothing in this document is a promise of yield, appreciation or return.

- **Price.** WDX is a new token and its price can fall at any time. A drop reduces the value of a holding and can downgrade the tier, even with no wallet activity.
- **Liquidity.** In a shallow pool, selling can be expensive or impossible in the desired size.
- **Transfer fee.** Every buy, sell or transfer of WDX costs 5%. Moving WDX between wallets reduces the balance and can downgrade the tier.
- **Holding rewards.** Rates are caps; the effective rate falls as more WDX is held in custody. Rewards are paid in WDX and their USD value depends on the price.
- **Dilution.** Holding rewards increase the amount of WDX in circulation, which can put pressure on the price.
- **Custody.** WDX bought on the platform is held by WEEDEX until the end of the lock period and cannot be sold before then.
- **Production.** Pool results vary and can be negative. Past results do not guarantee future results.
- **Technology.** Failures of the Solana network, the pools or the price services can suspend tiers, purchases or releases. Some platforms do not yet support Token-2022 tokens with a transfer fee.
- **Conflict of interest.** WEEDEX issues WDX and uses its price to set tiers. The company's market conduct policy for the token will be published.
- **Regulation.** The legal nature of the token, the tiers, the rewards and the referral compensation is under review. New rules may change or suspend parts of the system.

This document is for information only. It is not an offer of securities or investment advice.

Open items before publication

These points must be settled before this whitepaper is published.

- [ ] **Burn policy:** publish the scarcity and liquidity criteria behind each burn and the disclosure schedule.
- [ ] **Ticker:** WDX or WDEX.
- [ ] **Token address (mint)** and decimals, after creation on mainnet.
- [ ] **Mint and fee configuration authorities revoked** and no freeze authority, confirmed on-chain.
- [ ] **Founders' wallet** that collects the transfer fee, published.
- [ ] **Team and founders vesting:** duration, cliff and the contract used.
- [ ] **Allocation wallets** published, so anyone can check the balances.
- [ ] **WDX/USDT liquidity pool** created, with measured depth.
- [ ] **Company market conduct policy** for its own token.
- [ ] **Production distribution to the referral network (2% per level):** rule defined, implementation in progress.
- [ ] **Legal opinion** on the token, tiers, rewards, referral program and transfer fee.
- [ ] **Independent audit** of the platform and of any contract used (vesting, multisig).
